

Scatter plot showing the relationship between FLEXIs (% RBP sites) (Y-axis) and Other short introns (% RBP sites) (X-axis). The axes range from 0 to 20. A red diagonal line represents the identity line (y=x). Data points are colored circles (yellow, orange, black, grey). Most points are clustered near the origin, with a few points showing higher values for both metrics, particularly around 12%.
